Featured Speakers at CMG’10

As you look over the agenda for this year’s CMG conference, make sure you note the Keynote and Featured speakers on Monday. You will find a large amount of worthwhile information in all of them.

This year’s Keynote Address, *IT Game Changers: The Performance Professional’s Guide to Becoming a Technology Trailblazer*, will be delivered by Glenn Anderson. Glenn has been a recognized expert on information systems and strategies for many years, and he will have much to say about one of the on-going challenges for all of us: how to deal with the latest new technology in our ever-changing environments. Don’t miss this opportunity.

This year, rather than a single Plenary speaker, we will have a half dozen Featured speakers following the Opening Session and Keynote address. We have gathered experts from across industry to give you a look at where our profession is and where it is heading:

- Annie Shum will speak on *The “Measured” Way to Cloud Computing: Workload Characterization, Pricing Option Selections, and Capacity Planning*. This will be another wonderfully informative and thought-provoking session.
- Nalini Elkins will speak on *Network Performance Management in 2015*
- Scott Barber will speak on *A Performance Testing Story From Conception To Gravestone*
- Imad Mouline will speak on *The Evolution of the Architecture of Web applications Requires a Load Testing Evolution*
- Jaqui Lynch will speak on *A View of UNIX and Pervasive Computing*

Finally, don’t forget that early registration ends on Friday, October 8. There are just a few days left, so get your registrations in NOW and save money!

Bill Jouris
