

## Call for Vendor Tool Training

For over 40 years, CMG has been, and continues to be, the source for vendor agnostic expert advice and information for IT professionals dedicated to managing the capacity, performance and cost of computing systems across the enterprise.

To add to that expertise for our attendees, CMG has revived the **Vendor Tool Training** track to provide opportunities for vendor-specific tool training during the [imPACT 2016](#) conference, at no additional cost to attendees.

CMG welcomes a range of vendor tool training related to measuring, monitoring, predicting, diagnosing and reporting the capacity, performance and cost of computing systems, and related technologies and trends.

Presentations of how the underlying tools function and the impact on managing capacity, performance and cost are encouraged in order to provide attendees with a better understanding of tools that they may already use or are interested in acquiring.

This training will consist of one-hour sessions provided by the vendor during the conference and will be set up in a conference room with classroom seating for approximately 30 trainees. A projector, wall screen, laptop connectivity, and wi-fi will be provided. Additional sessions may be requested for multiple timeframes and will be considered based on availability.

**Vendors and Partners** are invited to [submit proposals](#) for tools training sessions. Please submit proposals and all inquiries to Elisabeth Stahl, 2016 Program Chair - [cmgpc@cmg.org](mailto:cmgpc@cmg.org).

**Proposals are due by August 19, 2016**
